

Munich Hacking Legal

25 – 26 April 2026

Introducing ELTEMATE

Legal Tech at Hogan Lovells

Combining profound legal expertise with AI technology

Creating efficiencies in legal processes

Using high quality data to provide reliable results

Artificial intelligence

Data science

Web app development

Digital forensics

Databases

Technology consulting

Team and Locations

Global team
of **120**
employees

50+ Software
Engineers, incl.
Data Scientists
and AI experts

20+ eDiscovery
and Data
Analytics
professionals

Amsterdam
Berlin
Frankfurt
Hamburg
London
Los Angeles

Market Recognition

Band 1
eDiscovery & Dispute Resolution

Band 1
Contract Analysis

Band 1
Compliance & RegTech

Band 1
Document Automation

Winner of the Regulatory,
Governance, & Compliance
Technology Award 2025

Highly Commended Legal
Technology Team of the Year,
Legal Business Awards, 2025

Top 100 AI Tech Company
World Future Awards, 2025

Winner of Legal Tech category,
PMN Management Awards, 2025

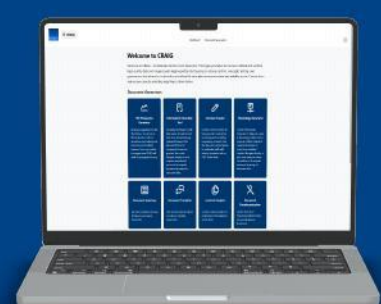

Winner of the Disruptive
Technology of the Year
Award 2025

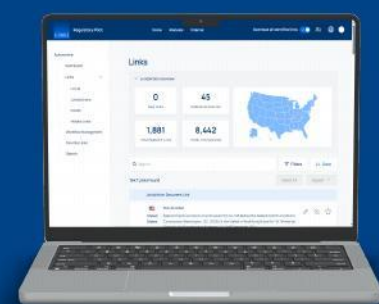

Shortlisted for FT Innovative Lawyers, 2024
Innovation in generative AI tools (Europe)
Innovation in regulatory solutions (Europe)
Intrapreneur of the year (Europe)
Innovation in Digitising Legal Practice (N. America)

The ELTEMATE Challenge

The ELTEIMATE Challenge

AI-Supported
EU Data Breach
Response Assistant

Current State and Problem

Across the EU, organizations struggle to handle a

data breach

efficiently and consistently.

The moment an incident is discovered, information is often incomplete, scattered across teams, or locked in emails and spreadsheets. Legal Counsel, Data Protection Officers (DPOs), and InfoSec teams frequently operate in silos.

Current State and Problem

When breach response lacks efficiency and consistency, it becomes difficult to:

- Gather reliable **incident details** during early discovery
- Determine whether an incident is **notifiable** under GDPR, NIS2, or local supervisory authority rules
- Meet strict **notification deadlines** such as the GDPR 72-hour requirement
- Coordinate technical, legal, and communication **responses**
- Maintain clear **documentation** and an auditable timeline

Current State and Problem

These challenges increase compliance risks, slow down containment, and create operational confusion.

All of this can lead to regulatory penalties, reputational damage, and inconsistent internal communication.

Organizations need a way to:

- Structure incident intake
- Assess legal risk quickly
- Guide next steps with confidence and EU-aligned logic

Your Task

Design and prototype a web-based

AI-Supported EU Data Breach Response Assistant

that helps organizations intake, assess, and manage
suspected data breaches more effectively

Your Task

Your solution should

- Enable fast, structured incident intake

- Build a simple, dynamic form for collecting breach details.
- Use AI or rules to highlight missing or unclear information.

- Provide an initial “notifiability” assessment

- Based on the provided data, classify the incident (e.g., likely notifiable / possibly notifiable / not notifiable).
- Reflect core EU concepts around data categories, individuals affected, and potential harm.

- Support stakeholder communication

- Generate draft notifications or templates (e.g., internal alert, supervisory authority note, or affected-individual communication).

- Visualize urgency and key deadlines

- Include a countdown for the timeline according to GDPR and a basic event log or audit trail.

- Incorporate an EU compliance knowledge layer

- Use structured logic, rules, or static data to reflect GDPR breach criteria, EU supervisory authorities, and NIS2 incident types.

Your Task

Your solution should focus on

- clarity
- usability
- user flow

The technical approach is up to you.

Low-code, AI APIs, classical logic, or a mix – as long as the final prototype shows how AI and automation can support legal and cybersecurity teams during the critical early hours of a data breach.

An abstract graphic design featuring two overlapping triangular shapes in shades of blue. The lighter blue triangle is on the left, and the darker blue triangle is on the right, creating a dynamic, geometric composition.
