Four Domains.
One Partner.

Compliance Cockpit

One platform for an effective compliance program

- Integrity Line**

Enable reporting concerns anonymously and promote ethical practices with a secure platform
- Policies**

Create, distribute and track policies with a centralized solution that ensures uniformity across your organization
- Approvals**

From gifts and invitations to conflicts of interest, streamline and automate your disclosures processes
- Campaigns**

Drive awareness and engagement by bundling policies, disclosure questionnaires, and training into targeted, trackable campaigns
- Insights**

Transform data into action with visual dashboards that simplify reporting and reveal emerging compliance risks
- Third Parties**

Meet your due diligence obligations easily, avoiding financial and reputational risk

Two gaps every speak-up investigation hits

Two gaps every speak-up investigation hits

Gap 1: Running the investigation

Legal questions with no answer on the spot

Jurisdiction-specific rules surface mid-investigation. Investigators freeze or guess – both are risky.

QUESTIONS THAT STALL CASES

- May this interview be recorded here?
- Must the works council be notified first?
- Does GDPR allow reviewing the mailbox?
- What does local labour law require?

How this is done today

Slow in-house review or expensive external review

“Can I legally do this?”

Gap 2: Documenting the investigation

Wording that becomes evidence against us

Well-intentioned notes describe allegations as facts, speculate about intent, or jump to conclusions.

PHRASES THAT CREATE RISK

- “He clearly intended to...” (speculation)
- “The subject violated...” (as fact)
- “Misconduct has occurred” (premature)
- Legal catches it late – or never

How this is done today

Often skipped entirely, which introduces risk

“Did I just incriminate us?”

Your challenge: Build the investigator's co-pilot

Legal Research + Litigation Risk Agent

Answers mid-case questions, screens for self-incriminating language

GROUNDING, JURISDICTION-AWARE ANSWERS

- May we record this interview here?
- Do we need the works council?
- What does GDPR allow on mailbox review?
- Cites the statute it relied on

Answers legal questions

REAL-TIME REVIEW OF THE CASE RECORD

- Flags allegations written as fact
- Catches speculation about intent
- Suggests safer, fact-based phrasing
- Explains the risk in one line

Protects the company

Build it as one agent, or two – you decide the architecture, we care about the outcome.

What we want to see from you

The Vision

- Answer legal questions as they arise
- Flag missed steps (works council, DPIA, GDPR)
- Detect risky phrasing in real time
- Suggest safer alternatives with reasoning

Deliverables

- Architectural concept (visual or technical)
- Clickable prototype or functional demo
- Short demo on sample case texts
- Clear business value for legal & compliance

Design it with

- Any agent architecture you can defend
- Hallucination controls & source citations
- Transparency around AI's reasoning & process steps
- Connected to our own Compliance Cockpit API, using the example data available

Have fun hacking!
